

Drying Cabinets 50 Series

Our 50 Series Drying Cabinets are designed to maximize ease of operation and device drying capacity while withstanding the demands of everyday use. Fast and easy drying with no worries.

Engineers of Confidence.

Drying Cabinets 50 Series

The new 50 Series line includes two sizes, available in stand-alone and pass-through configurations.

Efficiency

Air or hand drying is time-consuming, inconvenient, and ineffective. Belimed offers high-efficiency horizontal airflow pattern drying cabinets that achieve superior drying coverage regardless of a device's position in the chamber. Fast-drying means no more waiting for key parts or accessories to air dry on a rack. Our optional pass-through designs provide easy transfer between the contaminated and clean areas without manual intervention. All cabinets are equipped with an intuitive user interface that displays important cycle statistics and notifies system updates.

Flexibility

Since throughput requirements vary by facility, Belimed offers two chamber sizes for compact to large spaces. Large vertical internal chamber capacity and a modular design accommodate longer lumened devices positioned vertically to comply with device instructions for use. These can optionally be used with versatile device drying accessories like modular shelving for maximizing throughput. Variable drying modes can be selected based on specific instrument drying needs.

Reliability

The drying cabinets are made from heavy-duty steel components and are built to withstand the rigors of frequent use. Interior chambers are designed to accommodate constant moisture exposure and shelves are able to support heavy loads (up to 40 lbs. each) without bending or deforming. An integrated HEPA air filtration system prevents airborne contaminants from being blown into the chamber, protecting clean instruments and accessories.

A variety of configurations, options, and accessories are available to enhance our dryers' capabilities and workflow value:

Options

- Pass-through Configurations
- Patented LD200 Lumen Drying System
- HEPA Filtration System
- Seismic Brackets that are HCAI Pre-approved

Accessories

- Perforated, Half-width, Stainless Steel Shelves
- Removable Drip Tray to Collect Potential Moisture
- Stainless Steel Small Parts Tray
- Tube Drying Rack

50 Series Medical Device Drying Chambers

OPTIONAL LD200 Lumen Drying System:

Using low pressure HEPA filtered air to all connected devices, the LD200 accessory provides clinically dry robotic devices and endoscopes.

SAFE - Protects lumened devices during the drying process

EFFICIENT - Stages devices to enhance department workflow

SIMPLE - Easy to load and operate

FAST - Provides clinically dry robotic devices in 30 minutes
